

# OPERATOR MF30

230 V

Max. weight  
30 kg

## P-850MF30

230 V hinged window opener. Max. window weight 30 kg

### FEATURES:

- 230 V motor
- double flex stainless steel chain
- Max. load capacity 300 N

### PROS:

- suitable for top or bottom hinged windows
- noiseless and compact
- quick installation
- robust, maintenance-free

### Technical features

### MF30

|   |   |
|---|---|
| Power supply  | 230 V AC (50 Hz)                            |
| Max. thrust load capacity                                     | 300 N                                       |
| Max. traction load capacity                                   | 300 N                                       |
| Strokes (selectable at any time)                              | 200 and 380 mm                              |
| Absorption  | 0,32 A                                      |
| Loadless translation speed                                    | 24 mm/s                                     |
| Duration of max. loadless stroke                              | 16 s  |
| Double electrical insulation                                  | Si  |
| Type of service   | S2 di 4 min                                 |
| Operating temperature   | -5° C ÷ +50° C                              |
| Protection of electrical devices                              | IP 30                                       |
| Adjustment of the window frame connection                     | 15 mm                                       |
| Pins adjustment for swivel brackets                           | 15 mm                                       |
| Parallel connection of several actuators on the same window   | Only by means of suitable electronic device |
| Parallel connection of several actuators on different windows | Yes (see wiring diagram)                    |
| Chain position control  | Yes   |
| Acoustic device for signaling incorrect assembly              | Yes   |
| Weight of installed equipment                                 | 1,1 kg                                      |
